(54)【発明の名称】 化粧具

(57)【要約】

【目的】本発明は、使用し易く、保管、携帯にも便利で、しかも、製造コスト安価な化粧具を提供するものである。

【構成】本発明の化粧具1は、表面に任意数の収容凹部3が形成された合成樹脂の成形品からなる基体1と、この基体1の任意数の収容凹部3内に充填した化粧料と、化粧料が充填された収容凹部3の上面に貼着されて多数回に亘ってこの収容凹部3を施蓋、露出可能なシール部材5とを有する。この構成により、シール部材5による多数回に亘る収容凹部3の施蓋、露出が可能となり、使用し易く保管、携帯にも便利な化粧具を得ることができる。

CLAIMS

[Utility model registration claim]

[Claim 1] The makeup implement characterized by being stuck on the top face of said hold crevice where it filled up with the base which consists of mold goods of the synthetic resin with which the hold crevice of the number of arbitration was formed in the front face, the charge of makeup with which it was filled up in the hold crevice of the number of arbitration of this base, and the charge of makeup, covering many times, and having the seal member which can lid and can expose this hold crevice.

DETAILED DESCRIPTION

[Detailed explanation of a design]

[Industrial Application]

this design — a manufacturing cost — it is cheap, is easy to use it, and is related with a simple makeup implement convenient also for storage and a cellular phone.

[Description of the Prior Art]

Conventionally, charges of makeup, such as a lip stick and foundation, are held, and what is shown in drawing 3 and drawing 4 is known as a simple makeup implement used in case makeup of a lip or the skin, care and cleaning, etc. are performed.

The makeup implement 20 shown in this drawing by the product made of paper. For example, the tabular base 22 in which each three circular hold crevices 23 were formed, Lip stick 24a as charges of makeup (red, a sour orange, pink, etc.) from which a color differs respectively with which it was filled up in each hold crevice 23 of this base 22, and 24b and 24c. It has the seal member 25 which consists of a transparence sheet 21 stuck on the top face of said hold crevice 23 where it filled up with these lip stick 24a, and 24b and 24c. Tongue section 25a for pinching with a finger etc. is prepared in this seal member 25.

As shown also in drawing 4, by the shape of sheet metal, said base 22 joins superior lamella 22a which formed three circular holes 26 at fixed spacing, and inferior lamella 22b which has the crevice 27 corresponding to each circular hole 26 to each circular hole 26 and the condition that each crevice 27 is in agreement, and is unified.

[Problem(s) to be Solved by the Device]

In the case of the makeup implement 20 of a configuration of having mentioned above, however, said seal member 25 is currently stuck on the top face of each hold crevice 23. As shown in drawing 3 on the occasion of an activity, once it removes from the hold crevice 23. Since a reuse is impossible for the adhesives used for this seal member 25, while each hold crevice 23 cannot be filled certainly again, consequently disadvantage arises at the time of a actual activity. There was a problem that lip stick 24a with which it fills up in each hold crevice 23, and 24b and 24c will adhere to the surrounding accessories in a user's handbag etc., and will soil accessories etc., and it was inconvenient to storage or a cellular phone.

Moreover, the base 22 made of paper joined superior lamella 22a and inferior lamella 22b, and since it was the structure of sticking on the top face of superior lamella 22a further said seal member 25 which consists of a transparence sheet 21, it also had the problem that structure became complicated and a manufacturing cost became high.

Furthermore, when drilling said circular hole 26 in the case of said makeup implement 20, detailed paper or ** carried out adhesion survival at the edge of this circular hole 26 etc., and as a result of adhering to this paper or the front face of lip stick 24a with which ** was filled up in said each hold crevice 23 after the completion of manufacture of the makeup implement 20, and 24b and 24c, there was also a problem of causing quality degradation of a product.

Then, this design aims at offering the simple makeup implement which solves the problem mentioned above and is easy to use it, and is convenient also for storage and a cellular phone, and a possibility of spoiling quality moreover does not have, either, and can be manufactured to low cost.

[Means for Solving the Problem]

The makeup implement concerning this design is stuck on the top face of said hold crevice where it filled up with the base which consists of mold goods of the synthetic resin with which the hold crevice of the number of arbitration was formed in the front face, the charge of makeup with which it was filled up in the hold crevice of the number of arbitration of this base, and the charge of makeup, covers many times, and has the seal member which can lid and can expose this hold crevice.

[Function]

According to the makeup implement of this design mentioned above, the hold crevice of the number of arbitration formed in the base which consists of mold goods made of synthetic resin is filled up with the charge of makeup. Since many times is covered and the top-face side of the charge of makeup is covered by the seal member which can lid and can expose a hold crevice. In case the charge of makeup is used, it becomes convenient also for storage and a cellular phone that the charge of makeup does not adhere to the accessories of this makeup implement circumference etc. by lifting a hold crevice top face by the seal member in the case of storage and a cellular phone that what is necessary is to remove a seal member and just to expose the charge of makeup in a hold crevice, and it is easy to use it. Moreover, since paper material like said conventional example is not used for the makeup implement of this design, it can adhere to the charge of makeup, or there is not paper or ** about mixing and it can prevent quality degradation of a product.

furthermore, it consists of the fabricating operation of the base made of synthetic resin, restoration of the charge of makeup, and attachment of a seal member — simple — since process manufacture can be carried out, a manufacturing

cost can be reduced.

[Example]

One example of the makeup implement which starts this design with reference to the attached drawing hereafter is explained in detail.

The makeup implements 10 of this example shown in drawing 1 and drawing 2 are the mold goods made of synthetic resin, were equipped with the base 1 made of synthetic resin which presents the shape of a core box of the rectangular parallelepiped in which the underside carried out opening, and have established the hold crevice 3 where the opening configuration of three pieces is circular by the fabricating operation at fixed spacing in the substrate section 2 which forms the front face of this base 1. Moreover, the dimension of side plate section 2a of a base 1 is set as several mm (4 thru/or about 8mm).

In said three hold crevices 3, while being filled up with lip stick 4a as charges of makeup (red, a sour orange, pink, etc.) from which a color differs respectively, and 4b and 4c, it is transparent in the top face of each hold crevice 3, and the rectangle-like seal member 5 performs lidding to burriel lip stick 4a, and 4b and 4c.

In order to cover many times and to enable lidding and exposure of each of this hold crevice 3, the adhesives of weak viscosity are applied to the field by the side of the medial surface of said seal member 5, i.e., lip stick 4a, 4b, and 4c.

In addition, it is convenient if a text like "remove and use a seal member with a finger etc. and look after an activity with this seal member" is beforehand given to suitable tooth-space parts other than each hold crevice 3 of the front face of said base 1.

According to the makeup implement 1 mentioned above, to three hold crevices 3 formed in the base 1 which consists of mold goods of synthetic resin lip stick 4a, it is filled up with 4b and 4c, cover many times in the top-face side of lip stick 4a, and 4b and 4c, and the hold crevice 3 is lidded. Since it covers by the seal member 5 which can be exposed, lip stick 4a, 4b, in case 4c is used, the seal member 5 is removed. Lip stick 4a in the hold crevice 3, it becomes [that what is necessary is just to expose 4b and 4c] convenient [storage and a cellular phone] that lip stick 4a, and 4b and 4c do not adhere to the surrounding accessories of this makeup implement 1 etc., and it is easy to use it by lidding the top face of the hold crevice 3 by the seal member 5 in the cases, such as storage and a cellular phone.

Moreover, since said makeup implement 1 is not a product made of paper like said conventional example, there is not paper or room in which ** remains, and there is not paper or a possibility that ** may adhere and mix in the front face of the charge of makeup etc., and it can prevent quality degradation of the product of lip stick 4a, and 4b and 4c.

Furthermore, since it can manufacture at the simple process which consists of the fabricating operation of the base 1 made of synthetic resin, restoration of lip stick 4a, 4b, and the charge of 4c makeup, and attachment of the seal member 5, a manufacturing cost can be reduced.

This design is not limited to the example mentioned above, and deformation various by within the limits of the summary is possible for it.

For example, although the example mentioned above explained the case where a lip stick was used as a charge of makeup, in addition when using foundation etc. as a charge of makeup, it can carry out similarly.

Moreover, you may make it that it is not what can carry out the number of said hold crevice as the number of arbitration besides three pieces, and limits whether said seal member 5 is still more transparent, prepare the suitable knob wafer for this seal member, of course.

[Effect of the Device]

According to this design explained in full detail above, by having considered as the configuration mentioned above, it is [that it is easy to use it] convenient also for storage and a cellular phone, and moreover, there is no quality degradation and a makeup implement cheap [a manufacturing cost] and simple can be offered.
